High-Efficiency Termiticide

**A new level of
protection for your
most valuable asset**

Taking termite control to a whole new level

- A new level of effectiveness
- A new level of convenience
- A new level of confidence

A whole new level of Termite Control

Termidor has been protecting homes around Australia for over 19 years and is recognised as Australia's best and most effective Termite treatment.

BASF has also developed Termidor HE (High Efficiency) Termiticide providing homeowners with a superior treatment, and even greater confidence with reduced site impacts.

Termidor HE, has been developed with an advanced formulation which allows the same powerful active ingredient in the original Termidor to spread through the soil more efficiently. This allows for a more even treated zone to be created providing greater protection to your most valuable asset.

Once applied, Termidor HE binds to organic matter in soil tightly, and as long as the soil treated is not disturbed, remains in place for years. So Termidor HE not only provides you with the most advanced, superior treatment available from the start, but also goes on protecting your home for years.

Standard treatments have limited movement and often lead to an uneven distribution in the soil.

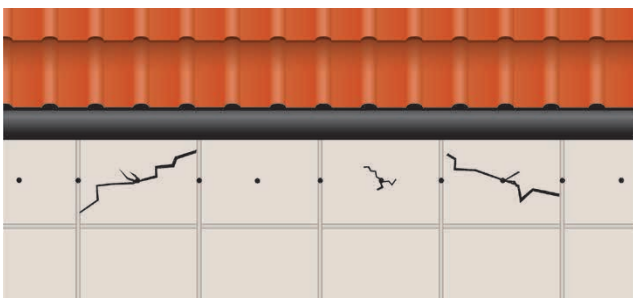

Termidor HE treatments spread more evenly through soil – providing a uniform more effective protective zone.

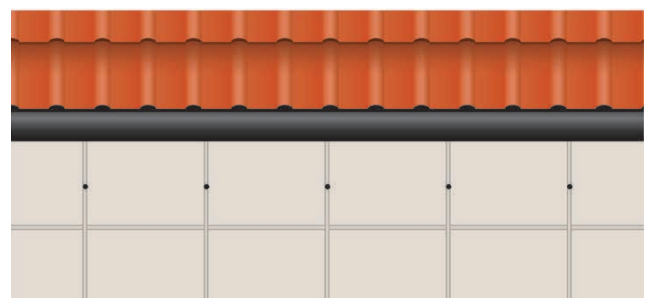

Less Disruption More Protection

The advanced technology in Termidor HE allows Pest Control Operators more scope to provide you a superior treatment to the Australian Standard, without cutting corners or damaging the aesthetics of your home.

Termidor HE significantly reduces the need to drill through tiles, meaning in most instances, treatments can be made without need for unsightly drill holes being made through tiles. Termidor HE also provides for additional spread vertically through soil, resulting in an improved protective zone whilst reducing impacts to landscaped and garden areas resulting from excessive excavations.

Standard treatment often require holes to be drilled through tiled or paved areas, resulting in unsightly damage and distribution.

Termidor HE allows for applications to be made more discreetly (eg. In grout lines) meaning a thorough treatment may be performed with minimal impact or damage.
