# Termidor® Foam

Termiticide and Insecticide

## The first-choice foam for complete termite colony control

- Specifically developed for stage 1 colony elimination with a formulation that maximises the Termidor Transfer Effect™
- Foam builds and holds in place ensuring the active is evenly distributed
- Foam formulation ensures minimal runoff and ease of application
- Cost effective and flexible solution for termite and ant control

# Termidor® Foam

## Termiticide and Insecticide

Termidor Foam has been specifically formulated as a dry foam which holds in place. This combined with the products unsurpassed 30:1 expansion ratio ensures that Termidor Foam will work through intricate termite workings and carton material without dissipating and turning to water like other foams can. Termidor Foam has also been specifically designed with 0.05g/kg of fipronil, ensuring the product does not kill too quickly allowing the powerful Termidor Transfer Effect™ to go to work. These features make Termidor Foam the perfect product for stage 1 colony elimination when treating termite nests in and off structure, bivouacs, baiting stations or other areas with termite activity.

Situation	Pest	Rate	Critical Comments
Termite nests in trees, stumps, posts, power poles, mounds and wall cavities. Termite activity when the nest cannot be located. E.g. active workings in timber, wall cavities.	Subterranean termites including but not limited to: <i>Coptotermes acinaciformis</i> , <i>Mastotermes darwiniensis</i> , <i>Nasutitermes spp.</i> , <i>Schedorhinotermes spp.</i> Drywood termites including: <i>Incisitermes spp.</i>	This product is a ready-to-use insecticide formulation. When dispensed, the formulation rapidly expands generating a dry foam with an expansion ratio of approximately 30:1, with 30g of product being dispensed in approximately 5 seconds producing about 1L of foam.	Shake well before using. Remove the outer cap and snap the actuator into place. Remove the finger pad cover. After using, replace the finger pad cover. Apply for approximately 10–30 seconds or until foam back flows per injection point. After application, hold the injector tip in place for approximately 5 sec to allow the product within the injector tube to dispense into the treatment area.  Drilling hole(s) may be required to gain access to the known or suspected gallery, harbourage or void. Care should be taken not to drill holes too close together or foam will emerge from other holes. It is recommended that drill holes be taped over when not in use.
Ant nests and enclosed harbourages	Nuisance Ants, including but not limited to: Argentine ant ( <i>Linepithema humile</i> ), black house ant ( <i>Ochetellus glaber</i> ), meat ants ( <i>Iridomyrmex purpureus</i> ), coastal brown ants ( <i>Pheidole megacephala</i> ), pavement ants ( <i>Tetramorium sp.</i> )		Shake well before using. Remove the outer cap and snap the actuator into place. Remove the finger pad cover. After using, replace the finger pad cover. Apply for approximately 5–10 seconds or until foam back flows. After application, hold the injector tip in place for approximately 5 sec to allow the product within the injector tube to dispense into the treatment area.  Drilling hole(s) may be required to gain access to the known or suspected harbourage or void. Care should be taken not to drill holes too close together or foam will emerge from other holes. It is recommended that drill holes be taped over when not in use.

Refer to the product label for full directions for use table.

## Packaging

Available in 567g cans
