Seclira®

Pressurised Bait

The clear choice for fly, cockroach and ant control

Seclira pressurised bait is powered by a unique, fast-acting active ingredient which, when applied to surfaces, dries clear and has no odour. Apply it to surfaces as a spot, or band treatment to control nuisance flies, cockroaches and ants in seconds and provide up to 6-weeks residual efficacy.

Situation	Pest	Critical Comments
<p>SECLIRA PRESSURISED BAIT is not a conventional residual spray and therefore does not work by pests simply contacting a sprayed surface. The attractants within this bait mean that pests will be attracted to and subsequently attempt to feed on treated surfaces; they will then pick up a lethal dose. Because of this bait function, only portions of vertical surfaces need to be treated</p>		
<p>Domestic, commercial, industrial, public buildings and facilities including but not limited to (Abattoirs, poultry farms, animal housing, garbage containers, food processing plants) and external areas associated with such establishments.</p>	<p>Nuisance flies including: Adult houseflies (<i>Musca domestica</i>) and Lesser houseflies (<i>Fannia canicularis</i>), and Sheep blowflies (<i>Lucilla cuprina</i>)</p>	<p>Spray surfaces where flies rest. Best results are achieved when applied to non-porous surfaces.</p> <p>Area Treatment: Point can toward target area from a distance no further than 30 cm and press down actuator. Make a light application at a rate of 60 cm/sec and avoid run off or dripping from targeted area. Area treatments are effective where flies congregate, roost and feed, which may include garbage receptacles and lids, refuse containers, under tables and benches, recycling bins, dumpsters, behind vending machines, plant/flower pots, under bars, eave areas, walls and/or areas where flies like to congregate or infest.</p> <p>DO NOT apply bait in areas that are frequently cleaned. This product will not adhere to surfaces that are dusty or greasy. Reapply when reinfestation occurs.</p> <p>Area Treatment: DO NOT apply bait in areas that are frequently cleaned. This product will not adhere to surfaces that are dusty or greasy. Reapply when reinfestation occurs.</p> <p>Band Treatment: Spray from a distance of no further away from targeted area than 15 cm to create a band application at a rate of 60 cm/sec. Band applications may be made to areas such as beam edges, receptacle edges, table or bench edges, around windows and window frames, under narrow eaves and other areas where there is a narrow area where flies land, roost and/or are likely to infest. Reapply when reinfestation occurs.</p> <p>Note: Around feedlot manure heaps. DO NOT apply bait on manure heaps or dispose of treated targets with manure.</p>
	<p>Cockroaches and Ants</p>	<p>Apply onto surfaces or into cracks and crevices where insects may be traversing, harbouring, feeding and breeding. Apply as a surface application up to but not exceeding the point of run off. Spray from a distance of 15 cm from the targeted area to create a band application at a rate of 30-60 cm/sec. DO NOT apply bait in areas that are frequently cleaned. This product will not adhere to surfaces that are dusty or greasy. Reapply when reinfestation occurs.</p>

Refer to the product label for full directions and use table.

Packaging

Pack size 454g.
